Ansible Configuration Management Project Summary

Student Name: Sally Munga
Date: 11/09/2025
Project: Automated Infrastructure Configuration with Ansible

🎯 Project Overview

Successfully implemented Ansible configuration management to automate 5 servers across multiple operating systems, establishing complete infrastructure-as-code practices.

✅ Key Achievements

- **5 Servers Automated**: NFS, 2 Web Servers, Database, Load Balancer
- **Multi-OS Support**: RHEL (yum) & Ubuntu (apt) package management
- **Zero-Failure Execution**: 100% success rate across all playbook tasks
- **GitOps Implementation**: Proper feature branching and PR workflow

🛠 Technical Implementation

- Created inventory management for multiple environments
- Developed idempotent playbooks for package installation, file deployment, and system configuration
- Configured SSH agent forwarding for secure authentication
- Implemented proper error handling for multi-OS scenarios

📊 Verification Results

- All servers responsive to Ansible ping
- Wireshark successfully installed on Ubuntu servers
- Directories and files created across all 5 servers
- Timezone configuration applied consistently
